

AMENDMENTS TO THE CLAIMS:

Please cancel claim 11 without prejudice or disclaimer.

1. (Currently amended) A computer implemented method for an auction comprising: establishing an auction system which is accessible via a network, and performs an auction for a plurality of items including a first item and a second item which is different than said first item;

generating by using a processor, a web page including a user interface for entering a plurality of bids in said auction, said user interface displaying:

~~an area for adding the plurality of bids; for entering a first bid for said item and a second bid for said second item,~~

~~an area for adding a plurality of conditions associated with the plurality of items including a budget condition, a maximum quantity condition, a minimum quantity condition and a precedence condition and a linear condition; a plurality of areas for entering a plurality of conditions, said plurality of areas comprising an area for entering a condition associated with said first item and a condition associated with said second item, an area for entering a condition associated with a set of items including said first item and said second item, and~~

an area for editing said plurality of conditions;

~~a bid table for displaying the plurality of bids; and~~

~~a plurality of areas for displaying the plurality of conditions;~~

receiving a plurality of bids ~~which are added by a bidder using the user interface, the received plurality of bids~~ including a bid for said first item ~~and [[,]]~~ a bid for said second item, and ~~receiving~~ a plurality of conditions ~~which are added by a bidder using said user interface, the received plurality of conditions~~ including a condition associated with said first item, a condition associated with said second item, and a condition associated with ~~a said~~ set of items ~~including said first item and said second item which are entered by a bidder by using said user interface;~~

displaying the received plurality of bids in the bid table and displaying the received plurality of conditions in the plurality of areas for displaying the plurality of conditions on the user interface;

generating a plurality of proposals for said bidder, a proposal in said plurality of proposals comprising a set of bids in said received plurality of bids that satisfies said received plurality of conditions;

formulating a winner determination problem as an integer program, and solving said integer program to determine whether said generated plurality of proposals are included in a winning solution to said integer program, [[;]] and displaying on an other ~~said~~ user interface a table identifying the generated plurality of proposals and indicating whether said generated plurality of proposals are rejected by the bidder; and

displaying a status of the received plurality of bids in the bid table based on a result of the solving of the integer program ~~included in a winning solution to said integer program.~~

2. (Previously Presented) A method according to claim 1, wherein the auction system is selected from a group consisting of an open cry auction, an ascending bid auction, and a descending bid auction.

3. (Previously presented) A method according to claim 1, wherein the plurality of conditions characterize combinations of bids from the bidder for desired items within the auction system.

4. (Previously presented) A method according to claim 1, wherein said plurality of conditions comprises a budget condition, and

wherein said method further comprises:

enabling the auction system such that it is responsive to said budget condition.

5. (Previously presented) A method according to claim 4, wherein the budget condition is specified by the bidder.

Serial No. 09/850,383
Docket No. YOR920010417US1

6. (Previously presented) A method according to claim 1, wherein said condition associated with said set of items is selected from the group consisting of a maximum quantity condition, a minimum quantity condition, a precedence condition, and a general linear condition.
7. (Previously presented) A method according to claim 1, further comprising: enabling the auction system so that it is responsive to seller conditions.
8. (Previously presented) A method according to claim 7, wherein the seller conditions specify a minimum value for a combination of items.
9. (Previously presented) A method according to claim 7, wherein the seller conditions specify a minimum value for a combination of a minimum number of items to be sold.
10. (Previously presented) A method according to claim 7, wherein the seller conditions specify a minimum value for a combination of items correlated to a precedence relationship.
11. (Canceled)
12. (Currently amended) A method according to claim 1 ~~41~~, wherein said network comprises the Internet, said user interface being displayed on said web page on the Internet.
13. (Currently amended) A program medium executable in a computer system for facilitating an auction, the program medium comprising machine-readable instructions to cause the computer system to execute:
establishing an auction system which is accessible via a network, and performs an auction for a plurality of items including a first item and a second item which is different than said first item;
generating by using a processor, a web page including a user interface for entering a plurality of bids in said auction, said user interface displaying:

Serial No. 09/850,383
Docket No. YOR920010417US1

an area for adding the plurality of bids;

an area for adding a plurality of conditions associated with the plurality of items including a budget condition, a maximum quantity condition, a minimum quantity condition and a precedence condition and a linear condition;

an area for editing said plurality of conditions;

a bid table for displaying the plurality of bids; and

a plurality of areas for displaying the plurality of conditions;

receiving a plurality of bids which are added by a bidder using the user interface, the received plurality of bids including a bid for said first item and a bid for said second item, and receiving a plurality of conditions which are added by a bidder using said user interface, the received plurality of conditions including a condition associated with said first item, a condition associated with said second item, and a condition associated with a set of items including said first item and said second item;

displaying the received plurality of bids in the bid table and displaying the received plurality of conditions in the plurality of areas for displaying the plurality of conditions on the user interface;

generating a plurality of proposals for said bidder, a proposal in said plurality of proposals comprising a set of bids in said received plurality of bids that satisfies said received plurality of conditions;

formulating a winner determination problem as an integer program, and solving said integer program to determine whether said generated plurality of proposals are included in a winning solution to said integer program, and displaying on an other user interface a table identifying the generated plurality of proposals and indicating whether said generated plurality of proposals are rejected by the bidder; and

displaying a status of the received plurality of bids in the bid table based on a result of the solving of the integer program.

~~establishing an auction system which is accessible via a network, and performs an auction for a plurality of items including a first item and second items which are different than said item;~~

~~generating by using a processor, a web page including a user interface for entering a plurality of bids in said auction, said user interface displaying an area for entering a first bid for said first item and a second bid for said second items, a plurality of areas for entering a plurality of conditions, said plurality of areas comprising an area for entering a condition associated with said first item and a condition associated with said second item, an area for entering a condition associated with a set of items including said first item and said second items, and an area for editing said plurality of conditions;~~

~~receiving a plurality of bids including a bid for said first item, a bid for said second item, and a plurality of conditions including a condition associated with said first item, a condition associated with said second item, and a condition associated with said set of items which are entered by a bidder by using said user interface;~~

~~generating a plurality of proposals for said bidder, a proposal in said plurality of proposals comprising a set of bids in said received plurality of bids that satisfies said received plurality of conditions;~~

~~formulating a winner determination problem as an integer program, and solving said integer program to determine whether said generated plurality of proposals are included in a winning solution to said integer program; and~~

~~displaying on said user interface a table indicating whether said generated plurality of proposals are included in a winning solution to said integer program.~~

14. (Canceled)

15. (Currently amended) A method according to claim 1, wherein said integer program is expressed by the following, subject to conditions specified by bidders in said auction:

$$\text{Max} \sum_{i, p} v_{i,p} x_{i,p}$$

where $v_{i,p}$ denotes a monetary value of a bid that bidder p has placed for item i , and, $x_{i,p}$ denotes a decision variable having a value of 0 when said bid is not in a winning

Serial No. 09/850,383
Docket No. YOR920010417US1

combination, and 1 when said bid is in a winning combination.

16-19. (Canceled)

20. (Currently amended) A method of conducting an auction in an auction system in which plural items are offered for auction by a seller, and plural bidders place bids on said plural items, said method comprising:

establishing an auction system which is accessible via the Internet, and performs an auction for a plurality of items including a first item and a second item which is different than said first item;

generating by using a processor, a web page including a user interface for entering a plurality of bids in said auction, said user interface displaying:

~~an area for adding the plurality of bids; for entering a first bid for said item and a second bid for said second item,~~

~~an area for adding a plurality of conditions associated with the plurality of items including a budget condition, a precedence condition, an alternate precedence condition, a quantity condition and a general linear condition; a plurality of areas for entering a plurality of conditions, said plurality of areas comprising an area for entering a condition associated with said first item and a condition associated with said second item, an area for entering a condition associated with a set of items including said first item and said second item, and~~

an area for editing said plurality of conditions;

~~a bid table for displaying the plurality of bids; and~~

~~a plurality of areas for displaying the plurality of conditions;~~

~~receiving a plurality of bids which are added by a bidder using the user interface, the received plurality of bids including a bid for said first item and [[,]] a bid for said second item, and receiving a plurality of conditions which are added by a bidder using said user interface, the received plurality of conditions including a condition associated with said first item, a condition associated with said second item, and a condition associated with a said set~~

Serial No. 09/850,383
Docket No. YOR920010417US1

of items including said first item and said second item which are entered by a bidder by using said user interface;

displaying the received plurality of bids in the bid table and displaying the received plurality of conditions in the plurality of areas for displaying the plurality of conditions on the user interface;

generating a plurality of proposals for said bidder, a proposal in said plurality of proposals comprising a set of bids in said received plurality of bids that satisfies said received plurality of conditions;

after said bidder has input said plurality of bid, formulating a winner determination problem including said plurality of conditions and a seller condition as an integer program, and solving said integer program to determine whether said generated plurality of proposals are included in a winning solution to said integer program,and displaying on an other user interface a table identifying the generated plurality of proposals and indicating whether said generated plurality of proposals are rejected by the bidder; and

displaying a status of the received plurality of bids in the bid table based on a result of the solving of the integer program,

wherein said integer program is expressed by the following:

$$\text{Max} \sum_{i, p} v_{i,p} x_{i,p}$$

where $v_{i,p}$ denotes a monetary value of a bid that bidder p has placed for item i , and, $x_{i,p}$ denotes a decision variable having a value of 0 when said bid is not in a winning combination, and 1 when said bid is in a winning combination,

wherein said plural conditions comprise a budget condition that specifies a total amount that a bidder is willing to pay for an item, said a precedence condition that indicates that bidder will win an item of plural items only if said bidder also wins another item of said plural items, said an alternate precedence condition which indicates that a bidder will win an item only if said bidder wins all of the items in a precedence set, said a quantity condition which specifies one of a maximum quantity and a minimum quantity of items that said bidder

Serial No. 09/850,383
Docket No. YOR920010417US1

will win, and said a general linear condition ~~which~~ indicates a coefficient for said plural items and an upper bound and lower bound on a sum of coefficients for said plural items, and wherein said seller condition comprises one of a condition indicating a minimum total amount that seller will accept for plural items, a condition indicating a minimum quantity of items in said plural items to be sold, and a precedence condition indicating that an item will be sold only if another item is sold.

21. (Canceled)

22. (Previously presented) The method of claim 1, wherein said plurality of items comprises plural sets of items including a first set of items and a second set of items which is different from said first set of items.

23. (Previously presented) The method of claim 22, wherein said plurality of conditions include a first condition and a second condition which is different from said first condition.

24. (Previously presented) The method of claim 23, wherein said first set of items is subject to a first condition and said second set of items is subject to a second condition which is different from said first condition.

25. (Previously presented) The method of claim 1, wherein said plurality of areas for entering a plurality of conditions include:

an area for entering a budget condition that specifies that the bidder will win the item only if a total amount of winning bids for said set of items does not exceed a maximum value;

an area for entering a precedence condition that indicates that the bidder will win the item only if the bidder also wins the other item in the set of items;

an area for entering an alternate precedence condition which indicates that the bidder will win the item only if the bidder wins all of the items in the set of items;

Serial No. 09/850,383
Docket No. YOR920010417US1

an area for entering a maximum quantity condition which specifies that the bidder will win the item only if the bidder wins no more than a maximum quantity of items in the set of items;

an area for entering a minimum quantity condition which specifies that the bidder will win the item only if the bidder wins no less than a minimum quantity of items in the set of items; and

an area for entering a general linear condition which indicates that the bidder will win the item only if a sum of coefficients assigned by the bidder for the set of items is not greater than an upper bound and not less than a lower bound.
